

What 30 g of protein looks like

✓ **Smart protein sources** *high protein, low calories (under 200 kcal per serve)*

Food	Amount	Protein	Calories
Prawns (peeled)	150 g	30 g	130 kcal
Tuna in springwater (tinned, drained)	115 g	30 g	135 kcal
Kangaroo steak	135 g	30 g	135 kcal
White fish (e.g. barramundi, snapper)	150 g	30 g	145 kcal
Protein powder (whey)	40 g	30 g	150 kcal
Turkey breast	135 g	30 g	155 kcal
Chicken breast (skinless)	135 g	30 g	160 kcal
High protein yoghurt, plain (e.g. YoPRO)	300 g	30 g	175 kcal
Pork fillet	145 g	30 g	175 kcal
Cottage cheese (low fat)	250 g	30 g	180 kcal
Beef rump steak (lean, trimmed)	145 g	30 g	190 kcal

+ **Protein with something extra** *more calories, because they also contain fats or carbohydrates*

Food	Amount	Protein	Calories
Greek yoghurt, strained (2% fat)	335 g	30 g	240 kcal
Tofu (firm)	200 g	30 g	290 kcal
Tempeh	160 g	30 g	305 kcal
Salmon	150 g	30 g	305 kcal
Edamame (cooked, shelled)	275 g	30 g	330 kcal
Eggs (large)	5 eggs	30 g	360 kcal
Lentils (cooked)	335 g	30 g	390 kcal
Black beans (cooked)	345 g	30 g	450 kcal
Tasty cheese (cheddar)	120 g	30 g	480 kcal
Chickpeas (cooked)	335 g	30 g	535 kcal

HOW TO USE THIS

Your goal is about **30 to 40 g of protein with each main meal** (breakfast, lunch, dinner), which adds up to **about 120 g a day**. The first table is the easiest way to get there.

Meat and fish are listed **raw** (the way you weigh them at home before cooking). Legumes also replace your side of carbohydrates, and you can combine sources, for example half a serve of eggs with half a serve of cottage cheese. Values are approximate and vary a little by type and brand. Nuts and seeds are left out on purpose. They do contain protein, but they are mainly fats.
